

Scenario one

A - Adding only one discount to a student profile:

1. After adding a discount to two different fees as in our case her (vol 1 & vol 2)
 - a. vol 1 had a discount with the type number
 - b. vol 2 had discount with the type percentage

as in the picture below the discount with number (vol 1) doesn't have any information like the second one which is (vol 2) it has the information mark, when hovering above it will show the information to the discount.

Where even the information here should show more information, to be exact it should show discount amount if it was a percentage or a number

For example

Vol 1 = 100 LD LD is the currency of the sign

Vol 2 = 100 %

vol 1 (01/08/2021)				unpaid	1000	1000.00	0		0
vol 2 (01/08/2021)				unpaid	1000	1000.00	0		0
Total					6460	Discount calculated in percentage(%).			0

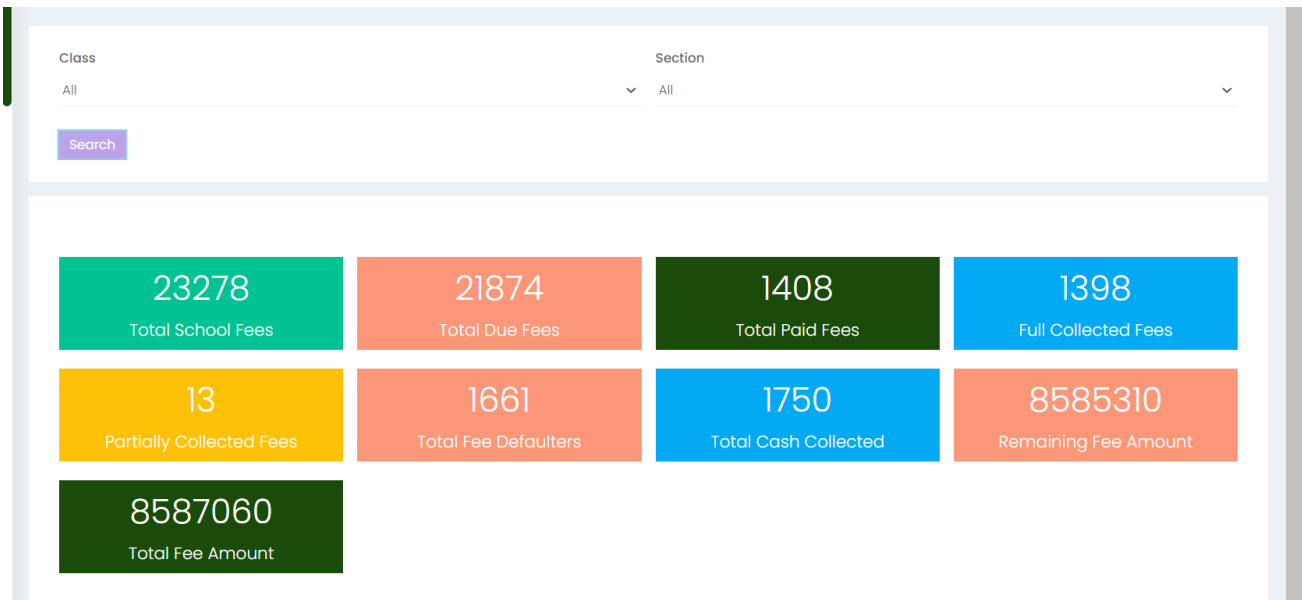

2. in case the discount is 100% and says the balance is 0 the collect fee sign should be changed automatically to collected fees, (the same mechanism that was added to fees variants, for example the students that are {registered in 2020 OR from Pakistan} don't have to pay a fee type so it says it is 0 and already collected by the system).
3. The exemption should be turned off as well, so user can't make any exemption if the discount is 100%

unpaid	1000	1000.00	0		0	100.0%		0		Collect Fee	
unpaid	1000	1000.00	0		0	100.0%		0		Collect Fee	
		6460	4460		0		0	-4460			

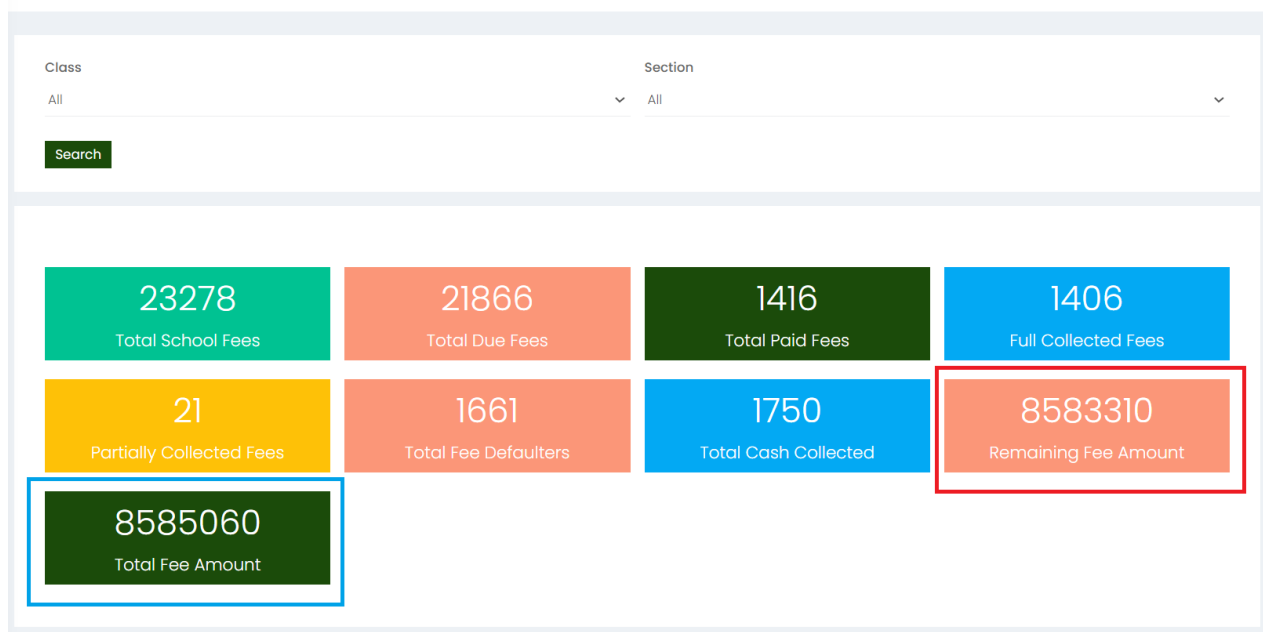

Number 2 and 3 works fine but after refreshing the website in order for it to function.

4. Fee Statistics

a. Before adding the Discount of 100% for one student of two fee types

b. After adding the discount of 100% for one student of two fee types

Scenario Two

I Could not add multiple discounts to one student.
